

Git installed

A terminal window titled 'johnppkyaw — -bash — 80x24' on a dark background. The window shows the command 'git --version' being executed, resulting in the output 'git version 2.39.2 (Apple Git-143)'. The prompt 'Johns-MacBook-Pro:~ johnppkyaw\$' is visible at the bottom.

```
johnppkyaw — -bash — 80x24
[Johns-MacBook-Pro:~ johnppkyaw$ git --version
git version 2.39.2 (Apple Git-143)
Johns-MacBook-Pro:~ johnppkyaw$
```

Guided LAB - 302.1.1 - Git installation on Windows

Introduction

Git is a widely used open-source software tracking application used to track projects across different teams and revision levels.

Lab Objective

In this lab, we will demonstrate the steps to install Git on Windows. For this lab, you should have **Administrator** privileges.

Learning Objectives

By the end of this lab, learners will be able to install Git on Windows.

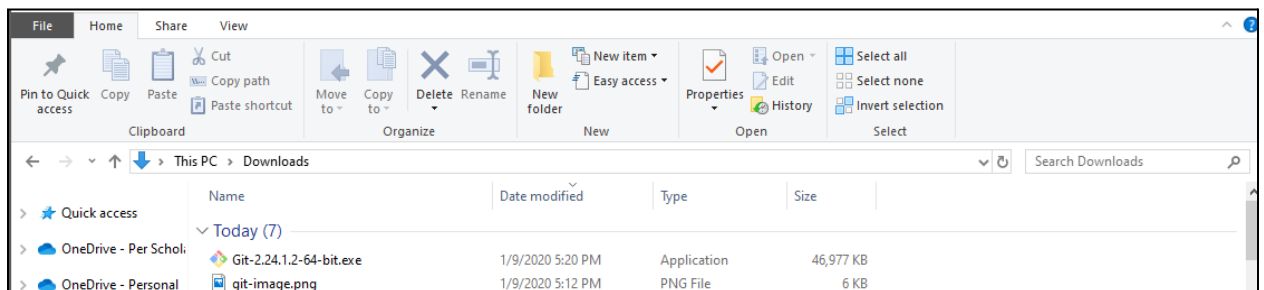

Instructions

How to download Git

1. Navigate to <https://git-scm.com/downloads> and select your platform (Windows).

2. After your download is complete, launch the Git x.xx.x.x-64bit.exe

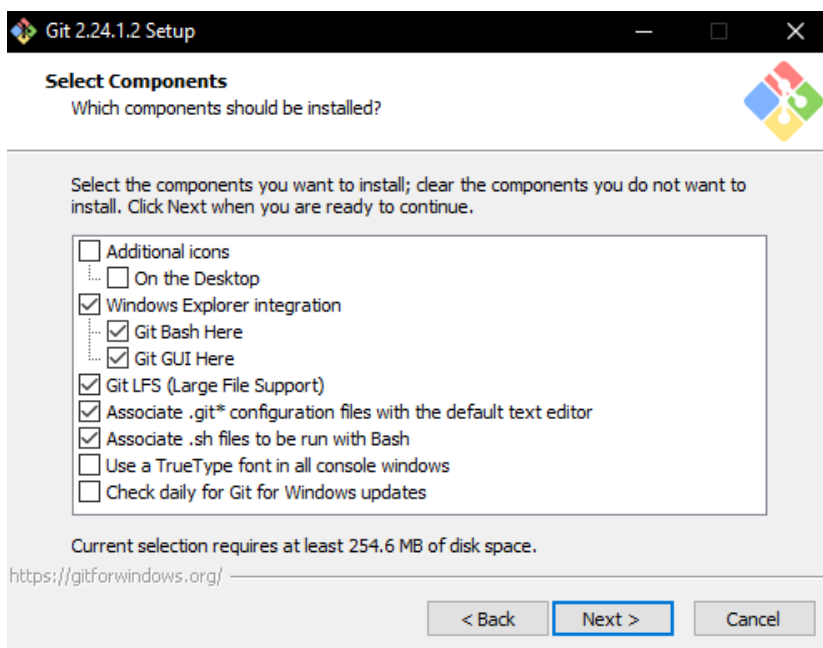

3. On the Git setup screen, click **Next**.

- Choose your installation location where you want to save Git. My recommendation is to leave the default location of *C:\Program Files\Git*.

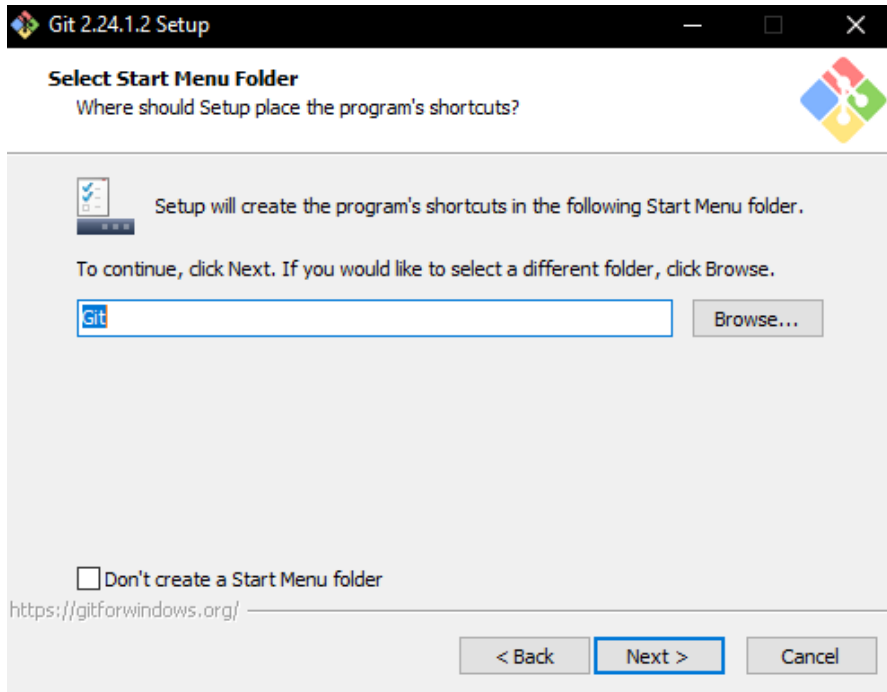

- On the Select Components screen, leave the default configurations and click the **Next** button.

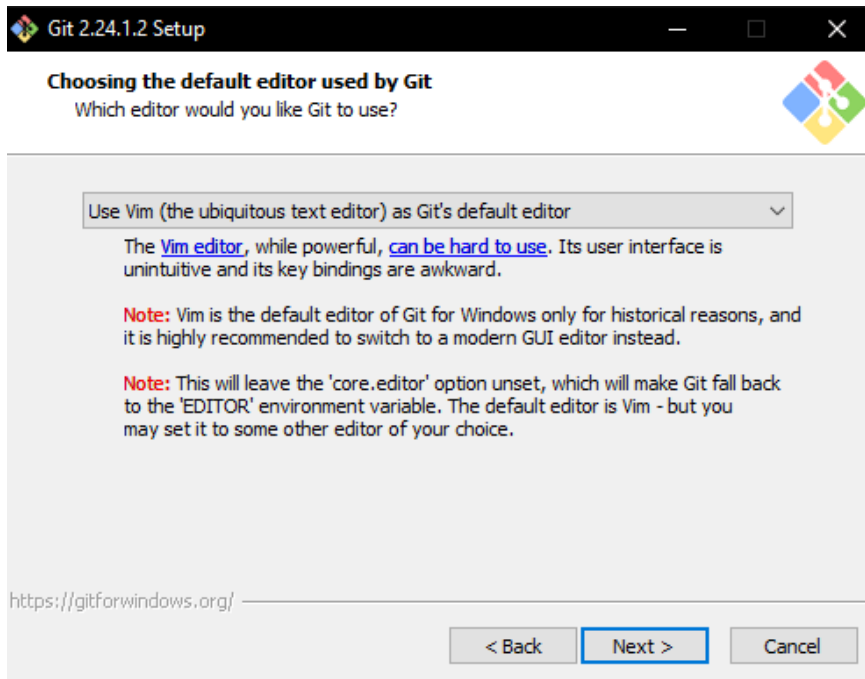

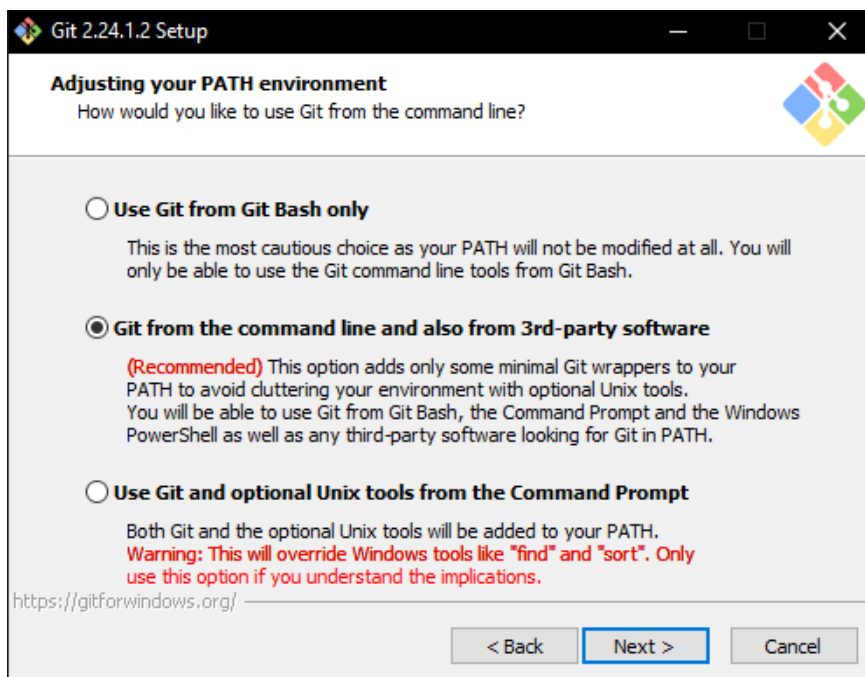

6. On the Select Start Menu Folder screen, leave the default configurations and click on the **Next** button

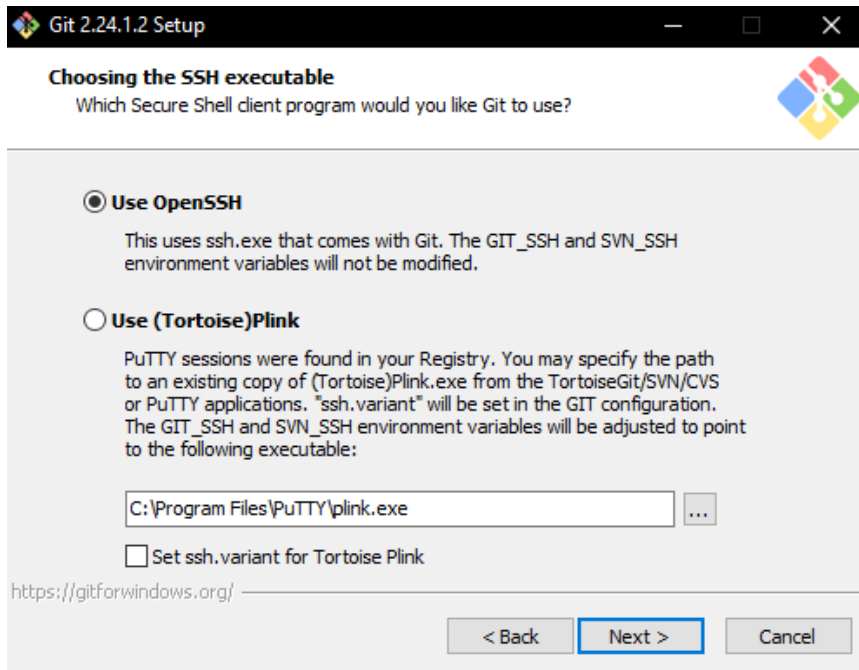

7. On the Choosing, the default editor screen, leave the default configurations and click on the **Next** button.

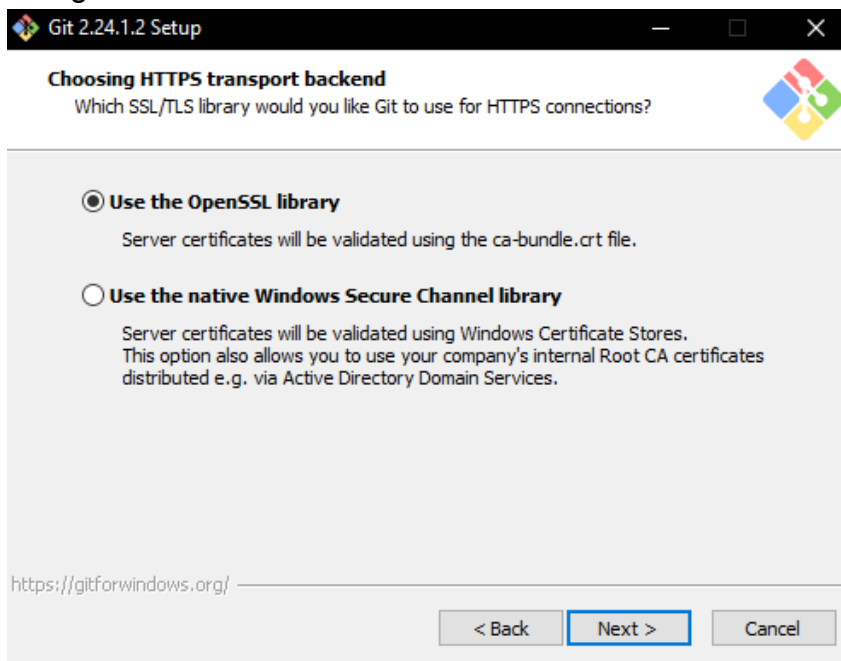

8. On the Adjusting Your PATH environment screen, leave the default configurations and click on the **Next** button.

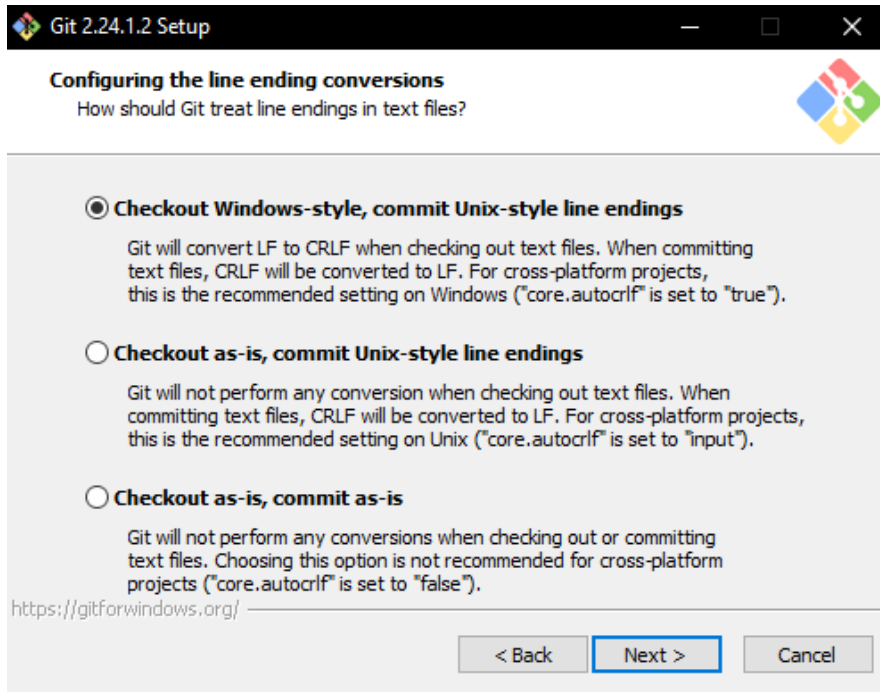

- Select the **Use openSSH** (radio button) option and click the on **Next** button.

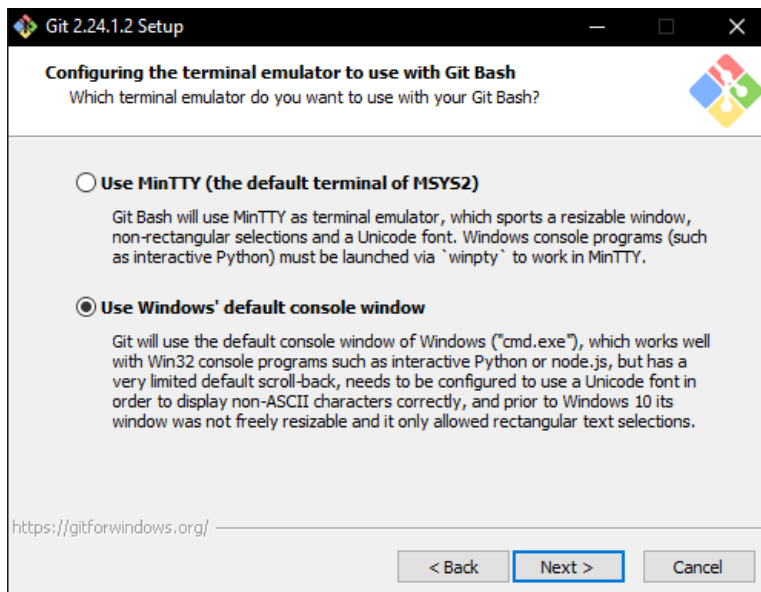

- On the Choosing HTTPS transport backend screen, leave the default configurations and click the **Next** button.

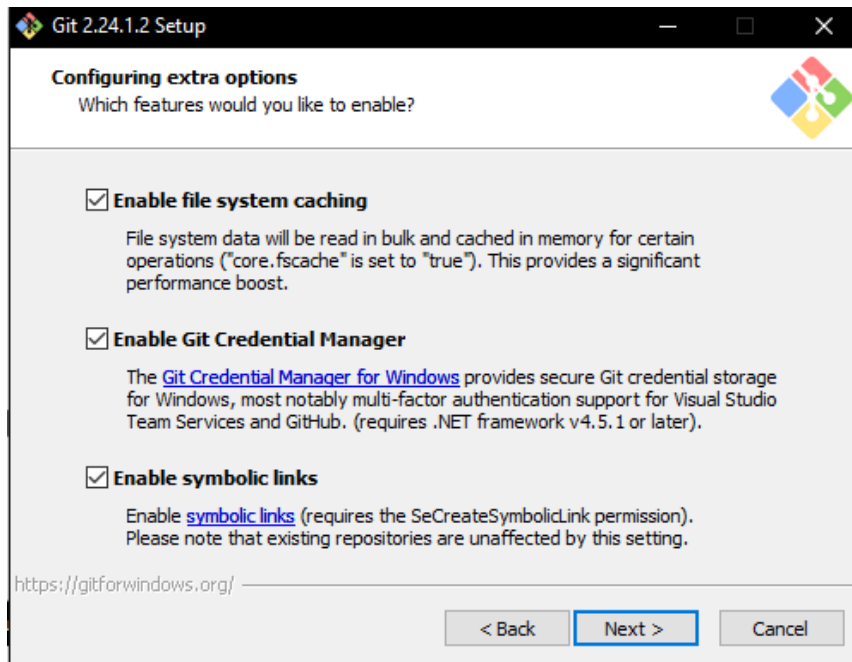

11. On the Configuring the line ending conversions screen, leave the default configurations and click the **Next** button.

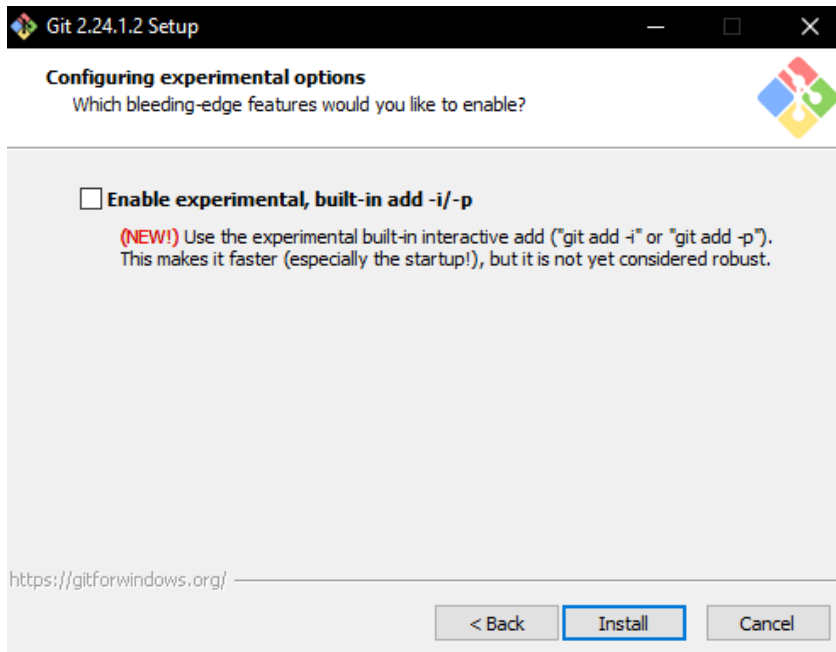

12. On Configuring the terminal emulator to use with Git Bash screen, I recommend selecting **“Use Windows’ default console window.”** After selecting your choice, click the **Next** button.

13. On the Configuring extra options screen, leave the default configurations and click the **Next** button.

14. On the Configuring experimental options screen, the screen leaves the default configurations and clicks on the **Install** button.

15. After the installation has been completed, uncheck the *View Release Notes* option and click on the **Finish** button.

You have completed the installation of Git on your Windows device. Please return to the Git/Github presentation to create your first repository.
